ILLINOIS BI-MONTHLY ECONOMIC DATA SUMMARY
October - November, 1990

HIGHLIGHTS

STATE

Illinois' second quarter gross state product rose to an estimated $269.6 billion for a $12.2 billion increase over a year ago. This represents a 4.7 percent gain over the second quarter of 1989 and a 2.1 percent rise over the first quarter of this year. Nationally the comparable gross national product increases were 5.2 percent from a year ago and 1.3 percent between the first and second quarter of 1990.

Exports in the first eight months of this year were up 25.7 percent over a similar period in 1989. Illinois' share of the nation's exports has risen to 3.3 percent, in comparison to 2.9 percent a year ago in August.

Retail Sales in Illinois rose 5.1 percent in the first eight months of this year over the same period in 1989. Sales in Chicago have remained strong for the past 25 months and in the first eight months of 1990 posted an increase of 7.7 percent. Nationally, there was a 4.0 percent rise in sales during the same period.

Cash receipts from farm marketings in the first seven months posted a 28.2 percent increase over the same period last year. This continues the strong growth in sales which began in the fourth quarter of 1989. For the U.S., farm cash receipts during this time rose by 3.3 percent.

New business incorporations (domestic) increased by 1.3 percent in the first nine months of this year for a gain of 292 over the same period in 1989. Nationally, the rate of new business incorporations has declined by 3.5 percent in the first eight months of this year.

The state's labor force for October was 6,034,000 persons. Of these, 5,676,000 were employed and 358,000 were unemployed. As a result of these changes, the state's unadjusted October unemployment rate registered 5.7 percent and the seasonally adjusted rate was 5.9 percent. Nationally the comparable rates were 5.4 percent and 5.7 percent respectively.

Among the major MSA's, in September, the Champaign-Urbana-Rantoul MSA had the lowest unemployment rate with 3.7 percent. The Bloomington-Normal MSA was the second lowest at 4.0 percent. Tied for the highest was the Decatur MSA and the St. Louis (Illinois portion) MSA with rates of 7.6 percent for the month.

STATE (continued)

The all-urban consumer price index (CPI-U) for Chicago rose in October at a 5.1 percent rate from a year ago. Nationally, the increase was 6.3 percent.

A monthly barometer of business activity, the Purchasing Manager's Survey for Chicago indicated mild economic contraction. In October, 47 out of 100 managers in the city reported business activity was increasing. Nationally, the U.S. barometer dipped to 43, registering its lowest figure since 1982.

NATIONAL

The advance estimate of third quarter GNP growth came in at a higher than expected 1.8 percent, and significantly stronger than the 0.4 percent growth rate for the second quarter of this year. The advance estimate also represents the sixth consecutive quarter of growth under 2 percent.

The strength of the third quarter estimate rests squarely with the consumer. Despite oil price increases, rising unemployment, lower consumer confidence, and talk of recession, consumers did their part and kept on consuming at a 3.6 percent annual rate.

Consumption was bolstered by continued strong gains in services, with two 5.1 percent quarters in a row. Durables did well despite faltering in the second quarter, and nondurables consumption gained some ground after three negative quarters. Stronger than expected auto sales were the primary cause of the robust durables consumption growth.

Nonfarm inventories increased by $7.8 billion nominally in the third quarter after a $13 billion increase in the second quarter. While manufacturers showed only a slight gain in inventories for the quarter, wholesalers and retailers were left holding more durable goods than they wanted. Here we are beginning to see some weakness in the auto sector, with a $3.1 billion inventory gain at the retail level. On a constant dollar basis, nonfarm inventory growth is running about 17 percent below last year's gain due primarily to well-placed caution by manufacturers.

Total private investment has been absolutely flat at just under a constant $701 billion for the last three quarters. Gains in nonresidential investment are being countered one-for-one by a debilitated residential construction market. Nonresidential fixed investment growth registered a positive 7.4 percent for the third quarter after declining at a 4.7 percent annual rate in the second. Strength here was spread across both structures and durable equipment, with the strongest gains in transportation and related equipment. Investment in information processing and related equipment grew weakly in the third quarter as did the industrial equipment category, indicating a lean winter for manufacturers.

Despite the moderate showing for the third quarter, GNP remains vulnerable to a deceleration. Weaker consumer activity corresponding to plummeting sentiment indexes, weaker investment activity due to declining output growth, and a continuation of depressed residential construction markets could easily tip the scales to the negative side.

ILLINOIS BI-MONTHLY ECONOMIC DATA SUMMARY
December, 1990 - January, 1991

HIGHLIGHTS

STATE

The state's labor force for December was 6,068,000 persons (third highest monthly total). Of these, 5,708,000 (second highest monthly total) were employed and 360,000 were unemployed. As a result of these changes, both the state's unadjusted December unemployment rate and the seasonally adjusted rate registered 5.9 percent. Nationally the comparable rates were 5.9 percent and 6.1 percent respectively. December marks the first time in eleven years that Illinois' seasonally adjusted rate has been below the U.S. rate.

Exports in the first ten months of this year were up 24.7 percent over a similar period in 1989. Illinois' share of the nation's exports has risen to 3.3 percent, in comparison to 2.9 percent a year ago in October.

Retail sales in Illinois rose 5.2 percent in the first ten months of this year over the same period in 1989. The October increase of 7.7 percent was the second largest in 30 months. Nationally, there was a 3.9 percent rise in sales during the same ten month period.

Cash receipts from farm marketings in the first nine months posted a 26.0 percent increase over the same period last year. This continues the strong growth in sales which began in the fourth quarter of 1989. For the U.S., farm cash receipts during this time rose by 5.1 percent.

New business incorporations (domestic) increased by 1.4 percent in 1990 for a gain of 397 over 1989. Nationally, the rate of new business incorporations has declined by 4.0 percent in the first eleven months of this year.

Among the major MSA's, in November, the Champaign-Urbana-Rantoul MSA had the lowest unemployment rate with 3.6 percent. The Bloomington-Normal MSA was the second lowest at 3.9 percent. The highest was the Decatur MSA with a rate of 6.9 percent, followed by the Rockford MSA with a rate of 6.3 percent for the month.

The all-urban consumer price index (CPI-U) for Chicago rose in December at a 6.4 percent rate from a year ago. Nationally, the increase was 6.1 percent.

A monthly barometer of business activity, the Purchasing Manager's Survey for Chicago indicated economic contraction. In December, 41 out of 100 managers in the city reported business activity was increasing. Nationally, the U.S. barometer dipped to 40, registering its lowest figure since 1982. An index below 44 is considered recessionary.

NATIONAL

The third quarter GNP was revised downward again. The final estimate of $4170 billion represents a 1.4 percent seasonally adjusted annual growth rate. For the second time, real personal consumption was revised downward by about $3 billion for a third quarter increase of 2.7 percent. Services consumption still leads overall consumption growth, but the final 3 percent third quarter growth rate represents a substantially weaker economy than the 5.5 percent advance estimate. Durable goods consumption increased at a 2.6 percent rate for the quarter and nondurables registered 2.3 percent growth.

With consumer expenditures accounting for nearly two-thirds of the GNP, a stall in consumer activity in the fourth quarter will pull the GNP negative. Depressed consumer sentiment and rising unemployment point to weak consumer expenditures in the fourth quarter of 1990 and provide the backdrop for a consumer-led recession. The October, November and December retail sales showed some consumer hesitancy, with October increasing slightly but not keeping pace with inflation and November along with December sales declining nominally by 0.1 percent and 0.4 percent respectively.

Fortunately, inventory building is quite low for the most part, indicative of a very cautious business environment and anticipated softening of demand over the winter. While overall inventory accumulation has been revised downward for the second month to a sedate $4.7 billion for the third quarter, manufacturing inventory change was revised upward for the second month to $3.7 billion. Restraint in the third quarter and very weak production numbers in October and November may indicate that a sell-off is underway. However, November shipments were also very weak.

Real fixed investment declined by 0.5 percent in the third quarter. A dismal quarter for the residential construction industry overshadowed a small gain in nonresidential structures and a moderate gain in producers' durable equipment. The 2.5 percent real increase in equipment investment was led by gains in both computer and industrial equipment.

The 1.4 percent growth rate of the third quarter GNP does not alter our view that the economy is in a recession that will become visible in the fourth quarter of 1990. While the strength of the third quarter estimate rests squarely with the consumer, that fact underscores the vulnerability of the economy to a consumer-induced recession. Despite lower consumer confidence in August and September, real consumer purchasing increased by 2.7 percent in the third quarter. This pattern is not expected to continue. Retail sales in October, November and December were weak and the index of leading indicators suffered its fifth consecutive decline in November. November and December's dive in employment and the accompanying weak production data provide convincing evidence that the recession is at least one quarter old.

ILLINOIS ECONOMIC SUMMARY

Department of Commerce and Community Affairs

Division of Research and Analysis

(FORMERLY THE ILLINOIS BI-MONTHLY ECONOMIC DATA SUMMARY)

HIGHLIGHTS February - March, 1991

STATE

Exports in 1990 were up 24.3 percent over 1989. Illinois' exports reached nearly $13 billion last year for a $2.53 billion gain over the previous year.

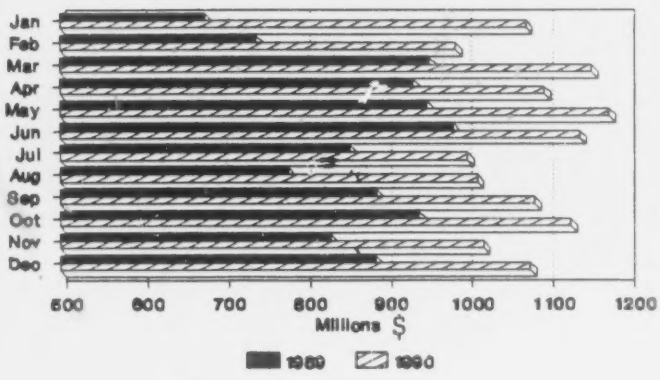
Cash receipts from farm marketings in the first eleven months of 1990 posted a 20.1 percent increase over the same period in the previous year. This continues the strong growth which began in the fourth quarter of 1989. For the U.S., farm cash receipts during this time grew by 5.7 percent.

Retail sales in Illinois rose 5.0 percent last year over the 1989 totals. Sales in Chicago increased 7.1 percent in 1990 for the largest gain in six years. Nationally, there was a 3.7 percent rise in sales last year.

The state's labor force for February was 6,086,000 persons (a record high month). Of these, 5,729,000 (also a record month) were employed and 357,000 were unemployed. As a result of these changes, the state's unadjusted February unemployment rate registered 6.4 percent and the seasonally adjusted rate was 5.9 percent. Nationally the comparable rates were 7.2 percent and 6.5 percent respectively. February marks the first time in over eleven years that Illinois' two unemployment rates has been below comparable U.S. rates.

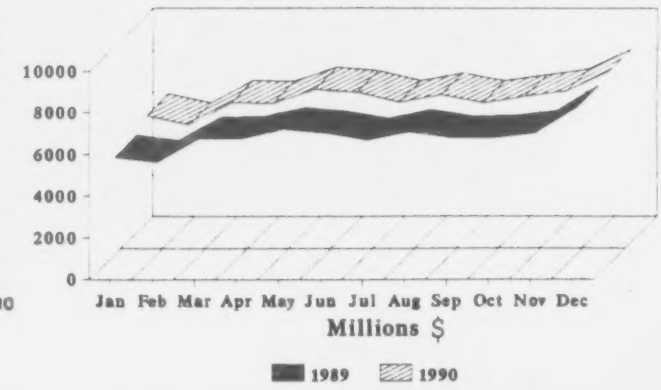
The all-urban consumer price index (CPI-U) for Chicago rose in February at a 4.9 percent rate from a year ago. Nationally, the increase was 5.3 percent.

ILLINOIS EXPORTS 1989-1990 MONTHLY



Source: U.S. Dept. of Commerce

RETAIL SALES 1989-1990 MONTHLY



Source: U.S. Dept. of Commerce

STATE (continued)

Among the major MSA's, in 1990, the Champaign-Urbana-Rantoul MSA had the lowest annual unemployment rate with 3.9 percent. The Bloomington-Normal MSA was the second lowest at 4.0 percent. The highest were the Decatur MSA and the St. Louis MSA (Illinois portion) with rates of 7.1 percent.

Coal production increased for the second consecutive year with a gain of 1.5 million tons over 1989. This represents an annual increase of 2.5 percent. Nationally there was a 4.0 percent rise in coal tonnage with Illinois producing 6.0 percent of the U.S. output.

A monthly barometer of business activity, the Purchasing Manager's Survey for Chicago turned upward in February. Last month 45 out of 100 managers in the city reported business activity was increasing. Nationally, the U.S. barometer rose slightly to 38. An index below 44 is considered recessionary.

NATIONAL

Real GNP growth for the fourth quarter of 1990 was revised slightly to -2.0 percent. While the performance was weak, it contains evidence supporting the argument for a quick turnaround. First, business investment showed some strength. Despite the large slide in production, investment in producers' durable equipment gained 4.2 percent with robust growth in office and computer equipment. Second, the large inventory sell-off will likely preclude an accelerated sell-off in the current quarter.

Operation Desort Storm expenditures have also boosted the economy at a critical time. The quick and relatively painless military victory will support a turnaround in both consumer and business sentiment. An early indicator, the stock market, has responded to the military success with a sustained rally with the Dow in pre-invasion territory.

Real disposable income slid 3.7 percent in the fourth quarter and consumption dipped by 2.9 percent.

Housing starts continued to deteriorate in January, down 13 percent from December.

Declining oil prices continue to turn the trade balance away from October's $11 billion deficit.

April - May, 1991

STATE

Illinois' gross state product rose $15.8 billion in 1990, for a 6.1 percent increase over the previous year. In constant dollars, the annual increase was 1.9 percent. Nationally the comparable 1990 rates of growth were 5.1 percent and 1.0 percent respectively.

The fourth quarter, 1990 total personal income for the state rose $2.24 billion over the proceeding quarter, or 3.9 percent when compounded at an annual rate. The corresponding U.S. increase was 3.5 percent.

Illinois' per capita personal income grew to $20,303 in 1990, placing it ninth among the states--up from twelfth in 1989. This represents a 7.6 percent annual gain. By comparison, the 1990 national average was $18,685 for an increase of 6.2 percent.

Cash receipts from farm marketings in 1990 posted a 17.7 percent increase over the previous year. This continues the strong growth which began in the fourth quarter of 1989. For the U.S., farm cash receipts last year grew by 4.9 percent.

Retail sales in Illinois rose 1.2 percent through February over the first two months of last year. Nationally, there was a 1.3 percent decline in sales during the same period.

The state's labor force for April was 6,045,000 persons. Of these, 5,657,000 were employed and 388,000 were unemployed. As a result of these changes, the state's unadjusted April unemployment rate registered 6.5 percent and the seasonally adjusted rate was 6.4 percent. Nationally the comparable rates were 6.5 percent and 6.6 percent respectively.

STATE (continued)

The all-urban consumer price index (CPI-U) for Chicago rose in April at a 4.4 percent rate from a year ago. Nationally, the increase was 4.9 percent.

Among the major MSA's, in March, the Champaign-Urbana-Rantoul MSA had the lowest unemployment rate with 4.4 percent. The Bloomington-Normal and the Springfield MSAs were tied for the second smallest at 4.7 percent. The highest was the Rockford MSA with 9.9 percent, followed by the Rock Island-Moline MSA with 8.3 percent.

A monthly barometer of business activity, the Purchasing Manager's Survey for Chicago continued upward in March when 46 out of 100 managers in the city reported business activity was increasing. Nationally, the U.S. barometer rose to 40 in March and 42 in April. An index below 44 is considered recessionary.

Dun & Bradstreet reported that Illinois had the largest decrease among the states in the number of business failures for 1990 with a drop of 37.2 percent. D & B noted that "The number of U.S. business failures jumped 20 percent in 1990--the sharpest annual increase since 1983."

NATIONAL

Real GNP decreased at a 2.8 percent annual rate in the first quarter according to the U.S. Bureau of Economic Analysis' advance estimate. Real personal consumption expenditures decreased by $9.5 billion in the first quarter, down 1.4 percent on an annualized basis. The largest losses were again focused in durables goods consumption which declined at a 10.8 percent annual rate. Nondurables fell at a 2.9 percent annual rate, while service consumption increased by $8.8 billion for a 2.6 percent annualized rate.

The first quarter saw a continued reduction in inventories, down $20.7 billion following the first quarter sell-off of $26.4 billion. Automotive retailers accounted for the lion's share of the sell-off, reducing inventories by $18.8 billion. Wholesale trade and other retail trade accumulated inventories in the first quarter while manufacturing inventories slid by $8.3 billion, less than half their fourth quarter rate. The $47 billion inventory sell-off of the fourth quarter of 1990 and the first quarter of 1991 is on par with the recession of 1973-74 and greater then the 1980 sell-off. With final demand turning the corner, inventories will contribute positively to growth in the current quarter.

Real nonresidential fixed investment declined at a 14.4 percent annual rate in the first quarter. Excess capacity and tight credit hobbled investment in nonresidential structures which declined at an 11.2 percent annual rate. Investment in producers' durable equipment fell at a 15.5 percent annual rate in response to the large slide in production. Residential fixed investment fell at a 26.5 percent annual rate for the quarter, with the weakness focused in single-family structures.

ILLINOIS ECONOMIC SUMMARY

Department of Commerce and Community Affairs

Division of Research and Analysis

(FORMERLY THE ILLINOIS BI-MONTHLY ECONOMIC DATA SUMMARY)

HIGHLIGHTS June - July, 1991

STATE

Illinois placed third nationally with $3.2 billion in agricultural exports last year. Feed grains accounted for a large portion of the 20.8 percent annual increase. For the U.S., farm exports rose 1.2 percent in 1990.

Total Exports set a second consecutive monthly record in April with $1.225 billion in foreign sales. Manufactured commodities represented 97.8 percent of the monthly total, with international trade exceeding $1 billion for the fifth successive month. Through April, Illinois' exports are up 6.6 percent. Nationally the comparable rate is 6.0 percent.

Retail sales in Illinois rose 5.1 percent in April and 2.4 percent year-to-date over similar periods of last year. Nationally, there was a 1.7 and a 0.1 percent rise in sales during the same periods.

The state's labor force for June was 6,061,000 persons. Of these, 5,620,000 were employed and 441,000 were unemployed. As a result of these changes, the state's June seasonally adjusted rate was 7.3 percent. Nationally the comparable rate was 7.0 percent.

Among the major MSA's, in May, the Bloomington-Normal and the Champaign-Urbana-Rantoul MSAs were tied for the lowest unemployment rate with 3.7 percent. The Springfield MSA was the next smallest at 4.0 percent. The highest was the Decatur MSA with 7.6 percent, followed by the Rock Island-Moline MSA with 6.0 percent.

STATE (continued)

The all-urban consumer price index (CPI-U) for Chicago rose in June at a 4.3 percent rate from a year ago. Nationally, the increase was 4.7 percent.

A monthly barometer of business activity, the Purchasing Manager's Survey for Chicago continued upward in June when 48 out of 100 managers in the city reported business activity was increasing. Nationally, the U.S. barometer rose to 51 in June. An index below 44 is considered recessionary.

NATIONAL

The final estimate of first quarter 1991 real GNP growth shows a -2.8 percent annual rate of decline. Revisions to the preliminary estimate of -2.6 percent were modest but predominantly negative. Real personal consumption was revised downward $1.2 billion for the quarter. A $3 billion negative revision in services consumption erased a $1.8 billion gain in motor vehicles. Total investment was lowered $2.4 billion mostly from nonfarm inventories, down $1.3 billion. Residential investment was pulled down by $0.6 billion and nonresidential structures and equipment were lowered by $0.3 billion each. Net exports gained $0.7 billion with positive revisions in both exports and imports. Government purchases were increased $0.5 billion with a $0.7 billion gain in federal defense purchases.

Real personal consumption expenditures decreased by $9.9 billion in the first quarter, down 1.5 percent on an annualized basis. The largest losses were focused in durable goods consumption which declined at a 11.7 percent annual rate. Nondurables fell at a 1.8 percent annual rate while service consumption increased by $7 billion for a 2.1 percent annualized rate.

The change in real business inventories was revised downward to a decline of $25 billion. This follows a fourth quarter sell-off of $26.4 billion. Automotive retailers accounted for the lion's share of the sell-off, reducing inventories by $17.6 billion. Wholesale trade accumulated inventories in the first quarter while manufacturing inventories slid by a mere $1.3 billion, compared to an $18.3 billion slide in the fourth quarter. The combined $51 billion inventory sell-off of the fourth quarter of 1990 and the first quarter of 1991 is on a par with the recession of 1973-74 and greater than the 1980 sell-off. With final demand turning the corner, inventories will contribute positively to growth in the current quarter and over the next year.

Real nonresidential fixed investment declined at a 16.3 percent annual rate in the first quarter. Excess capacity hobbled investment in nonresidential structures which declined at a 9 percent rate. Investment in producers' durable equipment fell at a 18.4 percent annual rate in response to the cyclical decline in demand. Residential fixed investment fell at a 25.3 percent annual rate for the quarter, with the weakness focused in single-family structures.

ILLINOIS ECONOMIC SUMMARY

Division of Research
and Analysis

(FORMERLY THE ILLINOIS BI-MONTHLY ECONOMIC DATA SUMMARY)

HIGHLIGHTS August - September, 1991

STATE

The all-urban consumer price index (CPI-U) for Chicago rose in August at a 3.3 percent rate from a year ago. This is the smallest increase in three years when it rose 2.9 percent during August, 1988. Nationally, the increase was 3.8 percent.

A monthly barometer of business activity, the Purchasing Manager's Survey for Chicago continued upward in August when 55 out of 100 managers in the city reported business activity was increasing. The seven point increase between July and August was the largest monthly jump since March, 1987. Nationally, the U.S. barometer also rose to 55 in August. A figure above 50 indicates expansion.

Retail sales in Illinois decreased 1.2 percent in June but remained ahead of the first half of last year by 1.9 percent. For the U.S., there was a 0.2 percent June decrease and a 0.6 percent year-to-date rise in sales during the same period.

The state's labor force for August was 6,035,000 persons. Of these, 5,598,000 were employed and 437,000 were unemployed. As a result of these changes, the state's August seasonally adjusted unemployment rate was 7.2 percent. Nationally the comparable rate was 6.8 percent.

Among the major MSA's, in July, the Bloomington-Normal MSA had the lowest unemployment rate with 4.1 percent followed by the Champaign-Urbana-Rantoul and Springfield MSAs at 4.3 percent. The highest was the Decatur MSA with 11.0 percent, followed by the St. Louis (Illinois portion) MSA with 7.3 percent.

New domestic business incorporations rose by 10.5 percent in August for the second consecutive monthly increase. Year-to-date incorporation filings are down by 617 or 3.1 percent through August for the state, and behind by 7.9 percent through May for the nation.

Illinois' first quarter Gross State Product rose to an estimated $282 billion for a gain of $1.3 billion over the fourth quarter of 1990. In constant (1982) dollars, the first quarter amount represents a decrease of 3.2 percent when compounded at an annual rate. In comparison, the U.S. Gross Domestic Product declined 3.0 percent during the same period.

The average annual pay of workers covered by unemployment insurance in Illinois rose to $25,312 last year for a 4.5 percent increase. This is 7.2 percent above the national average of $23,602 and ranked Illinois eighth among the states.

NATIONAL

Recent evidence supports the view that a modest recovery is underway. Private jobs grew 65,000 in August, led by a strong 42,000 job gain in manufacturing. Additionally, weekly hours regained three quarters of July's 0.4 hour decline, and average hourly earnings posted a 0.4 percent increase after July's 0.1 percent dip. These gains fueled healthy growth in output and income in August. Recent evidence on industrial activity has been especially strong. Factory payrolls have added 67,000 jobs in the last two months. In July, new orders for durable goods posted their largest increase in 20 years. Industrial production will post its fifth straight gain in August.

The recent consumer spending pace is sustainable. The 34,000 new jobs in August, combined with a 0.3 hour gain in the workweek and a 0.4 percent increase in average hourly earnings will erase virtually all of July's loss in wages and salaries. Thus, nominal wages and salaries in July and August are estimated to be 5.2 percent annualized ahead of their second quarter average. This strength will support income gains to bolster the consumer. Thus, we expect that strong growth in the middle two quarters of 1991 will give way to a lasting, if relatively slow consumer expansion. Indeed, current quarter spending is growing more briskly than the previous period's 2.8 percent clip.

As businesses limit hiring in order to control costs, productivity will improve. This process is already underway, with nonfarm business productivity rising at a 0.5 percent rate in the second quarter and probably at a faster pace in the current quarter. Through July, for example, while factory hours were 3.1 percent ahead of their second quarter average, manufacturing output was 5.1 percent ahead of the previous quarter. The associated reduction in the growth of unit labor costs will boost after tax corporate profits, which are projected to rise at a 7.8 percent annual rate over the balance of 1991. Better corporate profitability will support a rebound in investment activity, with business equipment purchases receiving a particular boost. The recent strength of factory orders hints at an early rebound in equipment spending.

Weak August home sales have raised questions about the durability of the recovery of residential construction, but these data are likely to be merely a pause that refreshes. The 1991 pickup in housing starts guarantees a double-digit gain in current quarter housing construction. Moreover, demand need not surge to stimulate new construction: even after August's 8.5 percent drop in new home sales, the inventory of unsold homes is at an historically low level. In addition, lower interest rates however, will prop demand through the summer: the Freddie Mac weekly survey of fixed rate mortgages showed a 29 basis point drop during August.

August's 42,000 expansion of manufacturers' payrolls, combined with a 0.2 hour increase in the factory workweek, was powerful confirmation of a broad-based surge in industrial output. The combination points to an 0.7 percent increase in factory production. Such a gain would dovetail with other reports of strength in this area. For example, the Purchasing Managers' Index jumped to 54.8 percent from 51.8 percent (a reading greater than 50 percent indicates an expanding economy). More significantly, new orders for manufactured goods rose 6.2 percent in August, with durable goods posting an 11.2 percent gain; both were the largest since 1970. The strength in orders will buoy production in the near term.
